

Tutorial 4 and 5

Q) What is cloudSim?

CloudSim is a simulation tool that helps researchers and students study how cloud computing requirements work without real cloud infrastructure. It is called and used to model and test cloud computing systems.

Q) What does CloudSim do?

*

* CloudSim allows users to:

- i) Simulate cloud infrastructure.
- ii) Testing scheduling & resource allocation.
- iii) Evaluate performance.
- iv) Optimize cloud services.

Prerequisites: JDK 8 or higher

Eclipse IDE

CloudSim source code

Apache commons math library

Add cloudSim source code to eclipse

Manually copy & paste code into eclipse project.

- i) open eclipse and create a new java project.
- ii) paste cloudsim code.
- iii) refresh the project.

Add required librarion.

- Add external JAR files

Run a CloudSim Example.

Ex: CloudSimExp.java in source folder

Output will display in console.

Output:

Starting CloudSimExp -

Serializing

Starting CloudSim version 3.0.0

Datacenter 0 is starting.

:

Simulation completed

output status → success

CloudSimExp finished
